

W1 Individual reflection - Jenny

I want to learn the terminology for scrum even better than I already do. To know the terminology will help me in both this project but also in future work environments that use scrum. To achieve this I will study individually by checking the course slides, but also do my own research. I will also attend as many lectures as possible. I would say that learning is our main objective (individually and as a group) the first week, which means that, going forward, I most likely can improve my knowledge in most aspects of the course.

Right now we haven't started out our project yet but we have started working in our group to figure out our group dynamics and ways of work. During this process I have tried to contribute with my knowledge about software project planning and scrum. The things I have said or done might have been new to someone in the group, and in that case I hopefully managed to teach them something. Going forwards, hopefully I can contribute with my project management knowledge to the group and maybe help some of my team members to get familiar with the structure as well. To do this I will try to explain things to my group members if something is unclear or hard to understand. I will also try to give suggestions when I can to improve our ways of work.

Like I already said, we haven't really started our project and use of scrum yet, which means everyone's contribution towards scrum has been limited. What we have done so far is done two exercises where we tried to use scrum. My contribution in those situations has been to give suggestions on how to use the method properly and by being active in the group dialogs. In the future aim to do the same but also make sure that our group is properly following the use of scrum.

My contribution towards the team's deliveries has been to show up, take on work tasks and join in on our discussions. I have also laid out the base of our project work by fixing a slack channel, a google drive workspace and a trello workspace. In the Trello workspace I also created two Trello boards, one for project planning/management and one for scrum. In the future I hope to contribute to the group deliveries by being helpful towards others and take on + finish user stories in time for our sprints. To do this I will help others when I can, be a good team player and make sure our work is on the right track.
