

Week 7 individual reflection Fabian Flaa

1. What do I want to learn or understand better?

I want to understand sqLite better, as I felt the work I have done this week involves that a lot, and not knowing too much about sqLite made the work take longer.

2. How can I help someone else, or the entire team, to learn something new?

Once again it is a lot about helping people to search for information when they face a problem. Also I need to be forward in that I am able to help, or at least try to when an issue presents itself. Suggesting designs of larger implementations can also be of use to others when helping them learn something.

3. What is my contribution towards the team's use of Scrum?

Continually working on improving our user stories, as we have seen user stories recently that were written in the start of the course, which are very unclear so we don't know what is meant. That is a wakeup call that we need to be more diligent with our user stories.

4. What is my contribution towards the team's deliveries?

I finished the remaining work on the functionality with saving, editing and removing reviews, then started making service methods against our database to simplify further implementation of new functionality.
