

# W6 Individual reflection - Jenny

## **What do I want to learn or understand better?**

This week the GUI “team” faced a new problem regarding switching small components within a fragment. We believe we have some sort of solution for it but in the future I would like to learn and understand more about how to implement “changing” components within a fragment in android studio. To do this I will first try to implement our solution for the part in our project that it is needed. Secondly, I will continue to research different ways to combat these types of issues/components for future development.

## **How can I help someone else, or the entire team, to learn something new?**

This week I helped the “GUI” group understand how to implement custom icons/images etc from outside sources. We needed this for our number picker buttons and it was a bit difficult in the beginning to understand how to do this. In the future I hope to be able to further show my group members on how to implement these types of things, when the situations occur.

## **What is my contribution towards the team’s use of Scrum?**

My contribution for scrum has been to successfully do a sprint review with our stakeholder where I gathered feedback on our deliveries. I have also actively worked towards the sprint goal, which was to finish the rating part of the application. This was done pretty successfully, with the exception of one interactive part of the detail view. Other than that, I contributed to the sprint planning by writing task lists and velocity(together with my group members) for the user stories, as well as planning the sprint in general. I aim to do the same in the future.

## **What is my contribution towards the team’s deliveries?**

My contribution for this week’s use of scrum has been to finish three user stories and also add some styling to other parts of the application. This was done together with some of my group members where we took turns on writing code, while the others did research and gave input on what to write. I believe I had very good input this week which had a positive effect on the team’s deliveries. I also solved the problem with custom buttons on my own, which had a great impact on the visual styling on the page. The stakeholder gave us very positive feedback regarding the page it affected and said it was a huge improvement since before.

Next week I aim to continue with providing good inputs and solutions for the code and I would also like to work a little bit more on my own. To do this I will take on a user story for myself but also some user stories together with some of my group members, as I find it to be a good way to learn more effectively and also brainstorm ideas.
