

## W.2 Individual reflection – Eugene

... the current situation or "what is" (A),

... what you want the situation to be or "what might or should be" (B), and

... a plan for getting from where you are to where you want to be or "feedback designed to reduce the gap" (A -> B).

### What do I want to learn or understand better?

I have previously participated in development of an Android application in another course. My goal is to learn about Model-View-ViewModel (MVVM) architecture which is the industry-recognized software architecture pattern that overcomes all drawbacks of MVP and MVC design patterns. I am also willing learn more about SQLite so that I can start working the application database.

### How can I help someone else, or the entire team, to learn something new?

Since I have a prior experience in Android app development, I can help other team members with Android Studio, especially when it comes to creating different fragments. I want to make sure that everyone will be comfortable with Android Studio by the end of next work week.

### What is my contribution towards the team's use of Scrum?

This week, the group has not been focussing on Scrum, we have rather been preparing for the next week. In our social contract, we have agreed to have choose a Scrum master each week, to avoid chaos when it comes to scrum. I hope that next work week we will actually vote for a Scrum Master.

### What is my contribution towards the team's deliveries?

My contribution to this week's deliveries is the UML diagram. I have planned what classes should the database consist of as well as the connection between each class. The goal is to further continue working on the database by expanding the UML in the upcoming weeks and following the UML when creating classes and their decencies.
