

## **Week 5 individual reflection Fabian Flaa**

### **1. What do I want to learn or understand better?**

while diving further and further into Android studio and app development in general, I have gained an interest for the area and want to learn more things about app development and the different libraries that are used in the field, as many methods we use have been new for me.

### **2. How can I help someone else, or the entire team, to learn something new?**

Now that the project is well under way, and I feel like I have fairly good knowledge of all of our code I need to be clear with that other people in the group can ask me for help when they need. Then once again the usual sharing of helpful online resources that always helps.

### **3. What is my contribution towards the team's use of Scrum?**

It's gonna be the same answer as last week. At this point we all have a fairly good understanding of scrum use, so the contribution from my end is mostly just adhering to scrum in my work. But we are tackling the problem of user stories being dependent on each other by making sure beforehand that we know what prerequisites every user story has, so in the coming weeks we will be able to work more independently from each other.

### **4. What is my contribution towards the team's deliveries?**

This week I worked on the connection between our database and our front-end GUI, specifically by implementing functionality to buttons for saving a review to the database, unfortunately it is not completely done as we didn't have all the ground work that this implementation needed in place, relating to the problem we had with co-dependent user stories.
