

Week 6 individual reflection Fabian Flaa

1. What do I want to learn or understand better?

while diving further and further into Android studio and app development in general, I have gained an interest for the area and want to learn more things about app development and the different libraries that are used in the field, as many methods we use have been new for me. This is the same as I said last week and continues to be true as I'm grinding out code.

2. How can I help someone else, or the entire team, to learn something new?

Once again it is a lot about helping people to search for information when they face a problem. Also I need to be forward in that I am able to help, or at least try to when an issue presents itself. Suggesting designs of larger implementations can also be of use to others when helping them learn something.

3. What is my contribution towards the team's use of Scrum?

It's gonna be mostly the same answer as the previous weeks, I am focusing on adhering to the agile principles of Scrum, and helping my team do the same. Once again the major focus has been on creating independent user stories and communicating with the other team members wherever there is overlap.

4. What is my contribution towards the team's deliveries?

This week my focus stayed on connecting our front-end to our back end services, mostly through different listeners in our gui. The highest priority for me has been making sure the review-part of our app works. So saving, editing, removing and displaying ratings. This has taken longer than expected and some work isn't finished yet.
