

Individual reflections should be submitted to your team's source code repository.

1. What do I want to learn or understand better?

There were not a lot of new things to learn this so it felt like I knew everything I need to do. I have now full understanding of how api implementation works and how the I can maneuver the recyclerview and also how viewmodels work. What I want to understand better this week is the mvvm architecture, how it should work and if our implementation is good.

2. How can I help someone else, or the entire team, to learn something new?

Now that I have experienced how it is helping this group, it totally depends on who I am helping. Some people just need guidance and others need a lot of help and maybe sometimes a demonstration of doing things. Another thing is asking them how it is going and starting the discussion so that they feel like they can get help without being embarrassed.

3. What is my contribution towards the team's use of Scrum?

For the current time it is to make sure we have convenient sprints and to let the team know what they need to learn/know before starting each sprint. Also, helping with the use of scrum to organize the work. Being the one with most experience with code it is a must that I always ask the team how it is going and tell them if there are any problems that may need a fix.

4. What is my contribution towards the team's deliveries?

My plan is to finish each task I have very early which will give me plenty of time to be able to help my other partners and to recommend changes if needed. Furthermore, I want to make sure that the team is not distracted from the main task "sprint" and maintain their concentration which will make our work effective. As well as coming up with solutions that do not require a lot of work, however provide an effective run.
