

1. what do I want to learn or understand better?

I want to better understand the concept of velocity and how to assign different user stories a velocity. We did a first attempt to this during this sprint but overestimated how much work the group could process during the week (or underestimated the velocity of each story). During our next sprint planning meeting we will try to make some adjustments to get a better estimation of what workload we can manage during a sprint.

2. how can I help someone else, or the entire team, to learn something new?

This week me and some members of the team started the GUI for the project. This was quite challenging since I have not used android studio before. It was nice to work in a smaller group and be able to help each other out. In the future I want to be able to contribute more to this discussion. To be able to do this I need to learn as much about android studio during our sessions as possible. I will do this by asking questions and be active during the work.

3. what is my contribution towards the team's use of Scrum?

During the sprint retrospective we discussed different ideas about how we should structure our meetings during the week. I would like this structure to be clear and useful for the team. To achieve this, I think that the team must try different strategies and see what works out. My contribution during our retrospective was to give my point of view on the issue.

4. what is my contribution towards the team's deliveries?

During the week I was working in a smaller group within our team. To work efficient within this group with our stories and tasks during the sprint I think that it is important to communicate well. I want to do this by talking to the group and make sure that I am up to date with our progress and everybody's work.
