

## **Week 8 individual reflection Oscar Palmqvist**

### **1. What do I want to learn or understand better?**

How scrum handles sub-teams, I remember something about “tribes” but are not really sure about specific strategies. I want to understand other scrum tactics than the ones we utilize today, I have heard of scrum poker for example. I also want to understand agile practices as a whole on a deeper level, not just scrum.

### **2. How can I help someone else, or the entire team, to learn something new?**

By sharing my prior experiences and capabilities from working with agile and general software development. I am really not sure of any other way of doing this.

### **3. What is my contribution towards the team's use of Scrum?**

Designating the work for the week, since we were in the last sprint, helping to focus on what can actually be achieved that will create value for the stake holder.

### **4. What is my contribution towards the team's deliveries?**

Fixed numerous bugs related to the database. One method had been left public when it should have been private and the front-end mistakenly used this method which resulted in the database being loaded every time there was a new review.
