

**Individual reflections should be submitted to your team's source code repository.**

1. What do I want to learn or understand better?

I now have a better understanding of scrum and api, however I still think there is a lot to understand more and be better with.

2. How can I help someone else, or the entire team, to learn something new?

If it is something I already know then I will try to guide them to what problems might occur and what is very important to learn. I try to also make sure that everybody knows their own responsibility.

3. What is my contribution towards the team's use of Scrum?

For the current time it is to make sure we have convenient sprints and to let the team know what they need to learn/know before starting each sprint. Also, helping with the use of scrum to organize the work. And now it is mostly about researching our best options for resources and also making sure the quality of other people's work is good enough. Or matches the expectations.

4. What is my contribution towards the team's deliveries?

My plan is to finish each task I have very early which will give me plenty of time to be able to help my other partners and to recommend changes if needed. Furthermore, I want to make sure that the team is not distracted from the main task "sprint" and maintain their concentration which will make our work effective.
