

Individual reflections should be submitted to your team's source code repository.

1. What do I want to learn or understand better?

I now have a better understanding of scrum and api. The next step is to learn more about how to connect the api to the application as well as to how to help others without having to stress out on time.

2. How can I help someone else, or the entire team, to learn something new?

Now that I have experienced how it is helping this group, it totally depends on who I am helping. Some people just need guidance and others need a lot of help and maybe sometimes a demonstration of doing things.

3. What is my contribution towards the team's use of Scrum?

For the current time it is to make sure we have convenient sprints and to let the team know what they need to learn/know before starting each sprint. Also, helping with the use of scrum to organize the work. Now I want to make sure that everybody starts early with their work so that others do their work in time and if someone needs help it can be possible to help without stressing out.

4. What is my contribution towards the team's deliveries?

My plan is to finish each task I have very early which will give me plenty of time to be able to help my other partners and to recommend changes if needed. Furthermore, I want to make sure that the team is not distracted from the main task "sprint" and maintain their concentration which will make our work effective.
