

**1. what do I want to learn or understand better?**

I really feel like I have learned a lot about how to use android studio during this course. I do also realize the importance of knowing the necessary tools when starting a project, since learning how to use them will take quite a lot of time. This is a insight that I can bring to a future project.

**2. how can I help someone else, or the entire team, to learn something new?**

During our sprint reflection the team discussed our work over the whole course and our use of Scrum. This was great to get an idea of in what areas our team have been successful and where we have room for improvement. This was a good learning process for the entire team, and I plan to contribute to a similar discussion during our final weeks of this course.

**3. what is my contribution towards the team's use of Scrum?**

This week I was the Scrum-master and sent out messages with a daily scrum to check on the team and the progress of our work during the sprint.

**4. what is my contribution towards the team's deliveries?**

During this week the whole team was working on finishing the last details in the app. I was working with the GUI and we added some buttons and fixed some minor issues in the app. On Monday we will have a presentation of our app and after that write the final reflection of this course. I plan to contribute to these final deliveries of the course, and I am looking forward to summing up the course and our learnings from it together with the team.
