

1. what do I want to learn or understand better?

As this course just have started, I feel like there are a lot of things that I want to learn and understand better. One starting point I think could be to try to get a grip of how the concept Scrum can be used practically and what factors that are important to use it successfully within the group. To achieve this, I want to do some research about Scrum on my own to better understand it as well as talking about how we will implement it with my team members. This will help me to realize if I have understood the concept in the same way as they have and give me new points of view that I haven't thought of.

2. how can I help someone else, or the entire team, to learn something new?

I want to contribute to an atmosphere in our group where it is okey to ask questions and come up with new ideas and perspectives. When people feel that they can ask questions and be open with their thoughts and ideas they can learn from the other members of the group. To encourage the members of the group to do this, I will ask questions myself and make sure to check in with the others if they have any questions or ideas.

3. what is my contribution towards the team's use of Scrum?

I think it is a challenge to implement a new framework (at least I was not familiar with Scrum prior to this course) for teamwork with a team that has never worked together before. To make the use of Scrum successful in our group I think it is important to get to know the other members so I can communicate and work well with them. To make sure I do this I will be active during our work sessions and be curious about the others and what they can bring to our group.

4. what is my contribution towards the team's deliveries?

I will make sure I have done the tasks that I'm responsible for towards each delivery. In addition to that I will check if anyone in the group needs some support and be available. I think that it is a good idea to check in with the group if everything is going according to plan regularly.
