

Individual reflections should be submitted to your team's source code repository.

1. What do I want to learn or understand better?

Out of what we have already seen in this course, the things that I want to learn currently are scrum and the sprint structures. I have already got an idea of how they work, however, I think it would be very efficient for me and my team to actually understand it better. I want to get to know my partners better which will make it possible for me to push them through their limits and learn more.

2. How can I help someone else, or the entire team, to learn something new?

What matters the most about learning something is the will of that person. So what makes a person drop out of a learning curve is being stuck at one point or getting bored. If that person needs help then the best way is to actually be there and communicate with that person. And as a partner I should always check on each member's performance, to make sure they understand. If they seem to be doing something the wrong way then it is better to contact them and discuss how they thought about it.

3. What is my contribution towards the team's use of Scrum?

For the current time it is to make sure we have convenient sprints and to let the team know what they need to learn/know before starting each sprint. Also, helping with the use of scrum to organize the work.

4. What is my contribution towards the team's deliveries?

My plan is to finish each task I have very early which will give me plenty of time to be able to help my other partners and to recommend changes if needed. Furthermore, I want to make sure that the team is not distracted from the main task "sprint" and maintain their concentration which will make our work effective.
