**Individual reflections should be submitted to your team's source code repository.**

1. <u>What do I want to learn or understand better?</u>

I have worked with a lot of api implementations, glide library and mvvm architecture and I understand a lot more now than before. I have also been the scrum master of this week and it felt like I did a good job especially with communicating with other members.  Next week I am planning on finding ways to save data and use api in the best way possible.

2. <u>How can I help someone else, or the entire team, to learn something new?</u>

Now that I have experienced how it is helping this group, it totally depends on who I am helping. Some people just need guidance and others need a lot of help and maybe sometimes a demonstration of doing things.

3. <u>What is my contribution towards the team's use of Scrum?</u>

For the current time it is to make sure we have convenient sprints and to let the team know what they need to learn/know before starting each sprint. Also, helping with the use of scrum to organize the work. As the scrum master of the week my goal was to make sure everybody knew their tasks and performed as well as they possibly could.

4. <u>What is my contribution towards the team's deliveries?</u>

My plan is to finish each task I have very early which will give me plenty of time to be able to help my other partners and to recommend changes if needed. Furthermore, I want to make sure that the team is not distracted from the main task "sprint" and maintain their concentration which will make our work effective. As well as coming up with solutions that do not require a lot of work however provide an effective run.
