1. **what do I want to learn or understand better?**

   Our team is going develop an app for movie rating. Since I have never created an app before our work will involve software and technical aspects that I'm not familiar with. My goal is to understand these tools so I can contribute to our work properly. To get there I need to prepare my self by watching tutorials etc. I also need to take advantage of the competences and knowledge that my team members have and ask them for help to speed up my learning.

2. **how can I help someone else, or the entire team, to learn something new?**

   The members of our team have quite different knowledge from previous courses on our respective program. This can be challenging when working together, but also a great opportunity for us to learn from each other. I want to contribute with my knowledge by stepping in where I feel like I can help and discuss my thoughts with the rest of the group to enable learning.

3. **what is my contribution towards the team's use of Scrum?**

   After a meeting with the product owner our team have a quite detailed and extensive description of what functions he wants in the app and how it will create value. I'm looking forward to breaking these ideas into smaller pieces to be able to create user stories. I believe that the focus on value creation and customer value that my education has provided will be helpful when our team will create user stories together.

4. **what is my contribution towards the team's deliveries?**

   At today's lecture some students were discussing this week's delivery with Håkan. This gave some new insights to how we could improve our project scope delivery. I want to continue to be observant at lectures and when talking to other students to be able to pick up ideas and thoughts that can help to improve our deliveries.
