W8 Individual reflection - **Jenny**

What do I want to learn or understand better?
Right now I feel like I have a pretty good grasp on how to work with android studio and GUI effectively. For future projects I would like to learn more about how to create more interactive components such as carusells, etc. Stuff that makes the GUI come alive so to speak. To do this I will look at youtube videos etc when the situation occurs the next time.

How can I help someone else, or the entire team, to learn something new?
This week I haven't contributed to help the team learn something new in particular at least. Everyone has become pretty independent in their work and can figure out stuff on their own. I did explain a little bit about javadoc to some of my group members that weren't sure how to use it but that was a minor conversation.

What is my contribution towards the team's use of Scrum?
My contribution for scrum has been to do a sprint review with our stakeholder. The feedback was overall very positive and made a great end to our last sprint. I also communicated with the stakeholder during the sprint to get his opinions on certain GUI stuff, which helped the development during the sprint. This week had quite mixed user stories to get closer to an overall finished product. I finished all of my user stories that I took on and I actually did some extra ones as well. The result of the sprint and the development of the GUI in general looks good and our stakeholder is satisfied.

Other than that, I contributed to the sprint planning by writing task lists and velocity(together with my group members) for the user stories, as well as planning the sprint in general.

This was the last sprint before handin so going forward I will work on our final report and also attend our presentation.

What is my contribution towards the team's deliveries?
My contribution for this week's deliveries has been to finish 6 user stories and also add some styling to other parts of the application. I also did some bug testing to ensure the program's quality in some parts. The stakeholder gave us positive feedback regarding the end result of the application and the parts that I worked on.

On top of what I did code wise I also finished most of the readMe file on gitHub.

Going forward I might do some finishing touches on the application but most of the focus will be to finish our group report and complete our presentation.
